

SPIRIT LEVEL MST 180 HOW DO YOU IMPROVE THE BEST?

Well, you fine tune and better every detail. That is why the new improved Hultafors MST 180 might appear similar at first glance. It still has the most sensitive vials available, ISO 9001-certified mounting for unique low tolerance and a solid profile that indicates strength and sturdiness.

Look closer and you'll see that the shape and placement of the handles have been improved for better balance. The profile has been given a slight hourglass-shape to prevent dirt from sticking to the spirit level.

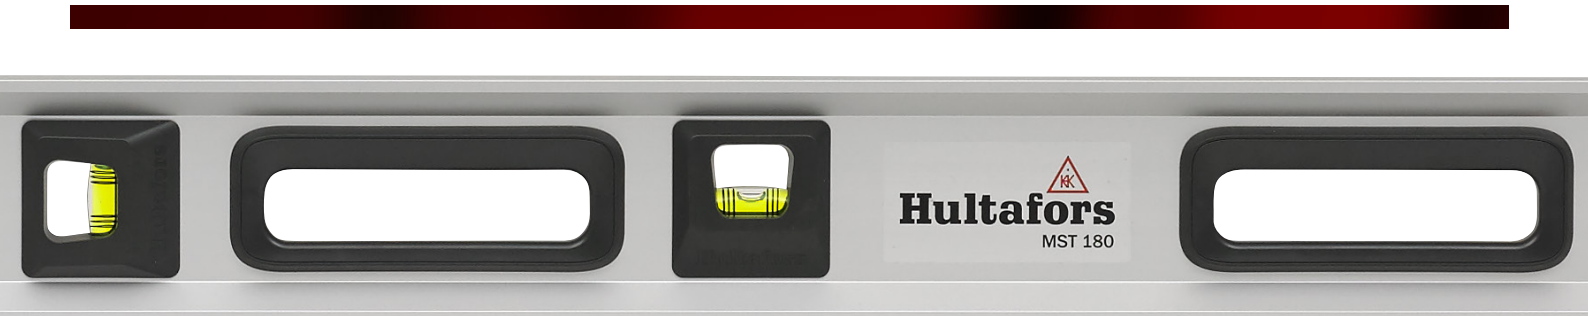

The new mounting of the vials increases legibility from every angle, especially when taking a reading from below.

And last, a new finesse is the holes to the profile that facilitates hanging cupboards on walls. You just screw the MST directly on the wall, let the cupboards rest on it while fastening, and finally unscrew the MST.

In short, the king of spirit levels still reigns on.

Spirit level MST 180 will keep it's present reference number, but MST 150 has been discontinued.

Transition to the new design of MST 180 starts from the 11th of July.

SPIRIT LEVEL ALUMINUM MST 180

The MST level is our strongest and most sensitive spirit level. Crush-proof block vials that is UV-resistant and withstands temperature changes with a +30% magnification lens and luminescent reflector for easier reading. Made from strong Aluminum profile measuring 100x25 mm weighing 1180 g/m that is easy to clean and equipped with ergonomic handles.

- The radius of the vial is 2000 mm, giving a sensitivity of 1 mm/m.
- Tolerance in normal position is ± 0.3 mm/m.
- Slots in the Aluminum profile makes it possible to fasten the level against the wall for easier mounting of example cabinets.
- The liquid in the vial is highly resistant to ultraviolet light and temperature fluctuations and gives the bubble optimal freedom of movement.
- The anti-static properties of the liquid means that the bubble is not affected by static electricity.
